## TERMINAL OBJECTIVE

Upon completion of this training, the participant will understand:

The safety equipment required for testing stationary batteries; the safety procedures to be followed during testing; the components that make-up the Cellcorder®; the procedure to set-up the Cellcorder for testing; the performance of a test; the procedure followed to review data and generate a test report; the evaluation of test results; and the requirements for maintaining records

## ENABLING OBJECTIVES

The standard for each of the following objectives is the material contained in the course materials provided to the participant.

**Given the course materials the participant shall be able to:**

- **C01** State the safety equipment that is required when testing stationary batteries.
- **C02** Recall the safety procedures that are followed during stationary battery testing.
- **C03** Recall the components that make up the Cellcorder.
- **C04** Recall the procedure that is followed to: set up the Cellcorder for testing and to set up thresholds.
- **C05** Discuss why voltage measurements should be made before resistance measurements are made on a battery.
- **C06** Recall how a test is performed, data can be stored and evaluated, and how reports can be generated.
